

Bowel screening non responders: Activating alerts in EMIS

- Bowel screening results received from the Bowel Cancer Screening Hub are automatically coded into GP IT systems (**as normal 686A, abnormal 686B, non-response 90w2 etc.**) – **Practices do not need to code them manually.**
- There is a protocol in EMIS that practices can activate to flag Bowel Cancer Screening non responders (SNOMED code 733601000000114). To activate the Bowel Screening alert (for the first time, or if it has been deactivated):
 - **Go to Configuration/ Template Manager/ EMIS Library/ EMIS Protocols/ Other Protocols, and find the Bowel one and right click on 'activate'. Please see screenshot:**

The screenshot shows the EMIS Web Health Care System interface. The main window is titled 'EMIS Web Health Care System - THE GREEN WOOD PRACTICE - 14111'. The 'Template Manager' window is open, displaying a list of protocols. The 'Bowel cancer screening non-responder alert' protocol is selected, and a context menu is open over it, showing the 'Activate' option highlighted. The details for this protocol are shown below the list.
